As with all M series cameras, the 1080p HD Dome IP Camera MD2222 incorporates Sense up+, a unique technology that delivers stunning video in low-light conditions. Utilizing intelligent image signal processing, auto gain control (AGC), and 3D Noise Reduction, the image of this model under demanding lighting conditions does not suffer from motion blur. The MD2222 is capable of producing four independent video streams, and different streams can be adjusted for different applications, depending on the individual user requirements.

Product Features

High Dynamic Range

A High Dynamic Range image is produced by interleaving two shutter line to accommodate details of both the darkest and brightest areas. HDR can extend image visibility under high contrast lighting scenes and improve image quality.

Back Light Compensation

Back Light Compensation (BLC) adjusts the exposure of the entire image to properly expose the subject of interest. Whether the subject is moving toward left, right, up, down, or any direction on the screen, BLC will provide the perfect exposure for the subject in front of a strong back light.

Sense Up+

Sense up+ is able to deliver outstanding video outputs in poor light conditions without experiencing motion blur. With this technology, you can see video more clearly during nighttime when sufficient lighting is lacking.

3D Noise Reduction

This function removes noise occurred in a video. Suppressing noise in low light conditions will retain details in a video and optimize the quality.

Video Security App

LILINViewer is available for both Android and iOS devices. This application provides security alarm push notification, real-time live viewing, and remote video playback.

SD Cards in Sync with NAV Software

The camera is designed with Micro SD/SDHC/SDXC card slots to provide video playback and recording saving. You can even synchronize an SD card with LILIN VMS (Video Management Software) – Navigator (NAV).

ONVIF-compliant

Open Network Video Interface Forum (ONVIF) is a standard for physical IP based security products. MD2222 complies with ONVIF Profile S.

Motion Detection

If properly set up, any motion in front of the camera will be detected and saved as an event. Motion in the selected area will provoke an alert.

Tamper Detection

This camera automatically detects tampering or failure. Also, an action can be taken when the lens or field of view is partially or completely blocked.

Alarm Detection

Alarm Detection is designed to provide the electronic detection of intruders.
